

Custom-made

TURNED PARTS

Precise | Unique | Made in Germany

UMETA

Everything revolves around you

UMETA offers you a high quality and inexpensive production of individual turned parts: From one of a kind for short runs or up to high quantities.

Our Services:

- raw material diameters from 3 to 42 mm
- parts lengths up to 600 mm
- processing of all free-cutting materials
- high-precision machining of complex contours
- axial and radial milling / drilling combined with turning work
- off center drilling combined with axial machining
- complex front and back side machining of parts
- polygon turning
- according to strictest environmental standards turned parts are cleaned with hydrocarbon technology
- all common procedures of surface treatment
- custom manufacturing, technical support and even the assembly of parts
- assembly services as an integrated part of our manufacturing

Our strength:

- latest CNC-controlled technology including cam-controlled multi-spindle lathes, automatic lathes with fixed or sliding headstocks, parallel lathes and turret machines with bar feeders.
- comprehensively equipped machinery hall with six-spindle automatic lathes for large-volume production.
- as powerful OEM partner we fulfill highest individual requirements as quality, service and logistics, for example documentation, initial sample inspection report according to VDA/PPAP, certified batch traceability, packaging.
- auditing according to CAQ system BABTEC and statistical processing: process capability analysis, control plan, FMEA, examination with measuring and testing equipment.

No compromise:

Real partnership and high reliability are very important for us – we would never give up on these values. UMETA takes your issues seriously in every case. If there are problems, we can work with your team and find a solution that will work in the way that is required.

Who offers more? The UMETA-PLUS

- + in-house assembly work including the entire manufacturing of components
- + all common procedures of surface treatment
- + in-house hardening facilities
- + innovative cleaning technology guarantees extremely clean turned parts
- + Up-to-date measuring and testing equipment
- + Quick, uncomplicated, one-stop

UMETA
We make it move.

Solution finder for turned parts

UMETA is committed to being there for our customers with our know-how; from the very first step through series production. Manufacturing individual turned parts in large and small quantities is one of UMETA's strengths.

Global market leader in grease nipples

Functional safety and durability – that's what our high quality grease nipples stand for. We offer the largest variety in the world with a product range consisting of more than 1500 different grease nipples.

Quality leader in grease guns

UMETA grease guns represent the highest quality and reliability. Meticulous engineering, high quality materials and intelligent product features make UMETA grease guns high performance precision tools.

Frank Maser, General Manager

Some words:

The reliability and flexibility of our CNC turning shop is highly appreciated by our customers. Highly motivated and the best trained employees dedicate themselves to your turned part project from the first step and initial sampling through to series production. We unite 90 years of continuously growing expertise with state-of-the-art manufacturing systems. Our driving force is to make customer requirements a reality in every respect.

Find out for yourself!

Yours, Frank Maser

Our quality management system is certified according to **ISO 9001**

Our environmental management system is certified according to **ISO 14001**
